MONITORING AND REPORTING **ONLINE HATE SPEECH IN** EUROPE

The eMORE project aims to **contribute to developing**, testing and transferring **a knowledge model on online hate speech and offline hate crime**, based on a circular and advanced joint monitoring-reporting system, to gain a sound understanding of the phenomena/trends over the Internet and offline, to allow comparative analysis at national/EU level, and to support the harmonised combating against hate-motivated offences at EU/national level.

The model is structured upon four main elements:

01 In-depth/up-to-date knowledge

02 Cooperation among relevant public/private stakeholders

03 Multidisciplinary/innovative technological approach

04 Visibility and engagement of victims/witnesses and citizens

www.emoreproject.eu

Technological tools:

Crawler

APP

Knowledge platform

Activities:

Monitoring online hate speech and reporting hate crime

Knowledge generation

Pilot-cases

Capacity building, networking and dissemination

Events:

National seminars

Trainings face to face

E-learning modules

Deliverables:

Research reports

Development of guidelines/manuals
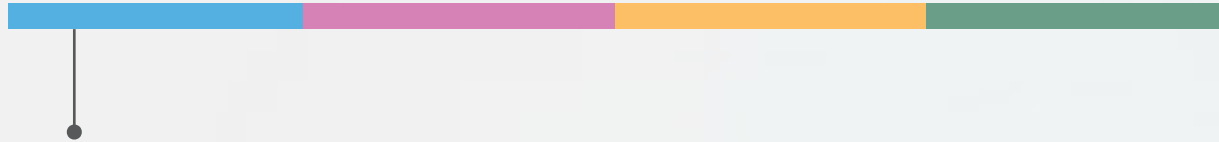

Policy recommendations

The Project will develop a knowledge platform available to target groups, which will allow to in-depth analyse hate phenomena online/offline.

The platform will process data/information collected through a crawler to monitor the Internet and a APP to report crime. Both of them will be developed by the Project, too.
The APP will be tested in 9 participating countries.

The knowledge base will include the most important categories of hate motivated offences (hate against gender, race, religion, sexual orientation and disability).

Objectives

- [✓] To develop/test an innovative tool to automatically detect/monitor online hate speech.

- [✓] To promote the engagement of victims/witnesses/bystanders through their access to the APP.

- [✓] To develop/test a multi-level reporting tool (APP) for hate crime.

- [✓] To promote networking/cooperation among stakeholders and to empower them.

- [✓] To develop/test a comprehensive circular knowledge model, based on the integration between the data/information collected through the monitoring and reporting tools developed by the Project.

- [✓] To enhance visibility and dissemination of results, thus supporting transfer to EU MS and sustainability.
